

## Marubeni concludes exclusive business partnership agreement with Enlitic, Inc. (United States)

Marubeni Corporation (“Marubeni”) and Enlitic, Inc. (“Enlitic”) have agreed to conclude an exclusive business partnership agreement for Marubeni to support the business development of Enlitic’s image diagnosis system, which utilizes Artificial Intelligence (“AI”), in the Japanese market.

Enlitic is a San Francisco startup that develops systems with deep learning, an AI-related technology, and applies it to medical data for image diagnosis (X-ray, CT, MRI, etc.), thereby allowing doctors to find malignant tumors and various disorders more accurately and quickly.

Marubeni, which has a branch in Silicon Valley and is aiming to apply AI technology in the healthcare sector, and Enlitic, which is aiming for an early entry to the Japanese market, have reached an agreement to collaborate and take the business in the same direction. For commercializing Enlitic’s systems in the Japanese market, Marubeni’s roles are to coordinate partner companies and to support the application for approval from appropriate Japanese authorities.

Marubeni established an “IoT · Big Data Strategy Department” on April 1, 2017 and is promoting the utilization of AI, IoT and Big Data across its businesses. Through this exclusive business partnership agreement with Enlitic, Marubeni aims to contribute to the development of medical technology in Japan.
